

FRAUNHOFER-INSTITUT FÜR KERAMISCHE TECHNOLOGIEN UND SYSTEME IKTS

1 Membrane electrolyte system in laboratory scale.

2 Photocatalytic system in laboratory scale.

3 Technology demonstrator for testing a multi-stage process chain,  
(scale 1:1).

4 Test facility at pilot scale for electrochemical water treatment, built by  
Fraunhofer IKTS.

5 Examples of available membrane technologies.

6 Filtration system for ceramic NF-membranes, special solution for a demonstration project, built by Fraunhofer IKTS.

## ZLD-KONZEPTE AUF BASIS EINES BREITEN TECHNOLOGIE- PORTFOLIOS

### Hintergrundinformationen

One research focus of the Fraunhofer IKTS is the closure of water and material cycles. Based on its own technologies, various types of ceramic membranes are developed, characterized and specifically designed for water treatment processes in municipal and industrial applications. In combination with suitable technological additions such as polymer membranes, AOP technologies, electrode dialysis, electrochemical combustion, degassing and desorption technologies or anaerobic/aerobic treatment methods, the Fraunhofer IKTS is in a position to offer customers specific zero-salt solutions.

Liquid Discharge (ZLD) concepts to develop and implement. The outstanding solution possibilities for specific problems in water treatment based on the technologies available at the IKTS.

### Leistungsangebot

- Situations- und Systemanalyse
- Entwicklung kundenspezifischer Prozesse (Tests, Konzeptentwicklung und Pilotierung)
- Modellierung des Stoffaustauschs
- Verfahrensentwicklung und Anlagenplanung
- Komponentenentwicklung (z.B. Membranen, Sensoren, Funktionsbauteile)
- Prototypenfertigung von keramischen Komponenten und Versuchsanlagen
- Kundensupport (Mail, Telefon, vor Ort)

FRAUNHOFER INSTITUTE FOR CERAMIC TECHNOLOGIES AND SYSTEMS IKTS

1 *Laboratory-scale membrane electrolysis plant.*

2 *Laboratory-scale photocatalysis plant.*

3 *Technology demonstrator for testing of a multi-level process chain (scale 1:1).*

4 *Test facility in pilot scale for electrochemical water treatment, built by Fraunhofer IKTS.*

5 *Examples of available membrane geometries.*

6 *Filtration system for ceramic NF membranes, special solution for a demonstration project, built by Fraunhofer IKTS.*

## ZLD-CONCEPTS BASED ON A WIDE TECHNOLOGY PORTFOLIO

### Important background information

A major research focus of Fraunhofer IKTS in the field of water technologies is the investigation of various process stages and their combinational use with the aim of closing water and raw material cycles.

Based on in-house technology, various ceramic membranes for applications in the field of liquid filtration, electrodialysis, membrane distillation, membrane-supported extraction and membrane absorber systems can be developed, characterized and used for certain water treatment processes.

By suitable technological addition of e.g. the usage of polymeric membranes, AOP technologies, ultrasound, electrodialysis, electrochemical incineration, degassing and disintegration technologies or anaerobic/aerobic degradation technologies (especially for saline solutions) Fraunhofer IKTS is able to provide Zero Liquid Discharge (ZLD)

concepts. All special solutions for specific problems are based on the broad field of the listed technology portfolio of Fraunhofer IKTS.

### Services offered

- Situation- and system analysis
- Development of customer-specific processes (tests, concept development and piloting) by the usage of the Fraunhofer IKTS owned technology portfolio
- Analysis and modeling of mass transfer
- Process engineering and plant design
- Development of components (e.g. membranes, sensors ...)
- Prototype production of ceramic membranes, modules and test plants (lab to pilot scale)
- Customer support (by mail, phone or onsite)
